### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Arno on 6/8/06.

The application has been amended as follows:

- a) Cancel claims 15-17.
- b) Add new claim 44:
  - 44. (New) A method of forming a multiwell plate assembly comprising:  
placing a first tray comprising a plurality of sample wells onto a circuit board comprising one or more electrodes such that said one or more electrodes extend from said circuit board into at least some of said sample wells,  
placing a plurality of cell layers into said plurality of sample wells forming a plurality of assay chambers such that each assay chamber comprises:
    - a first compartment;
    - a second compartment; andat least one cell layer separating said first compartment from said second compartment, wherein said plurality of cell layers are attached to a second tray. –
  - c) Claim 42, delete "CFTR" and replace with - - Cystic Fibrosis Transmembrane Regulator genes - - .

d) Renumber claims 1-14,40-44, to 1-19, respectively.

The following is an examiner's statement of reasons for allowance: the prior art of record fails to teach or suggest a circuit board comprising one or more electrodes extending from the circuit board and a first tray comprising an array of sample wells having holes formed therein and placed over the electrodes so that the electrodes extend up and into at least some of the sample wells in combination with a tray comprising a plurality of assay chambers having a first compartment and second compartment and a cell layer. Mathus (5,972,694) is silent as to a circuit board with one or more electrodes extending from the board. Further, there is no motivation for modifying the plate in Mathus to have holes so that the plate is placed over a circuit board. Figure 5C appears to show the plate with electrodes molded therein. The electrodes appear to be integral with the plate.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David A. Redding whose telephone number is 571-272-1276. The examiner can normally be reached on Mon.-Fri. 6:00 - 3:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gladys Corcoran-Piazza can be reached on 571-272-1224. The fax phone
